Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Resumes des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre retribution par des agents commerciaux.

ABSTRACT

O'Neil, S.F., K. Newbould and R. Pickard. 1989. 1987 Atlantic salmon sport catch statistics, Maritime Provinces. Can. Data Rep. Fish. Aquat. Sci. No. 770. v + 73 p.

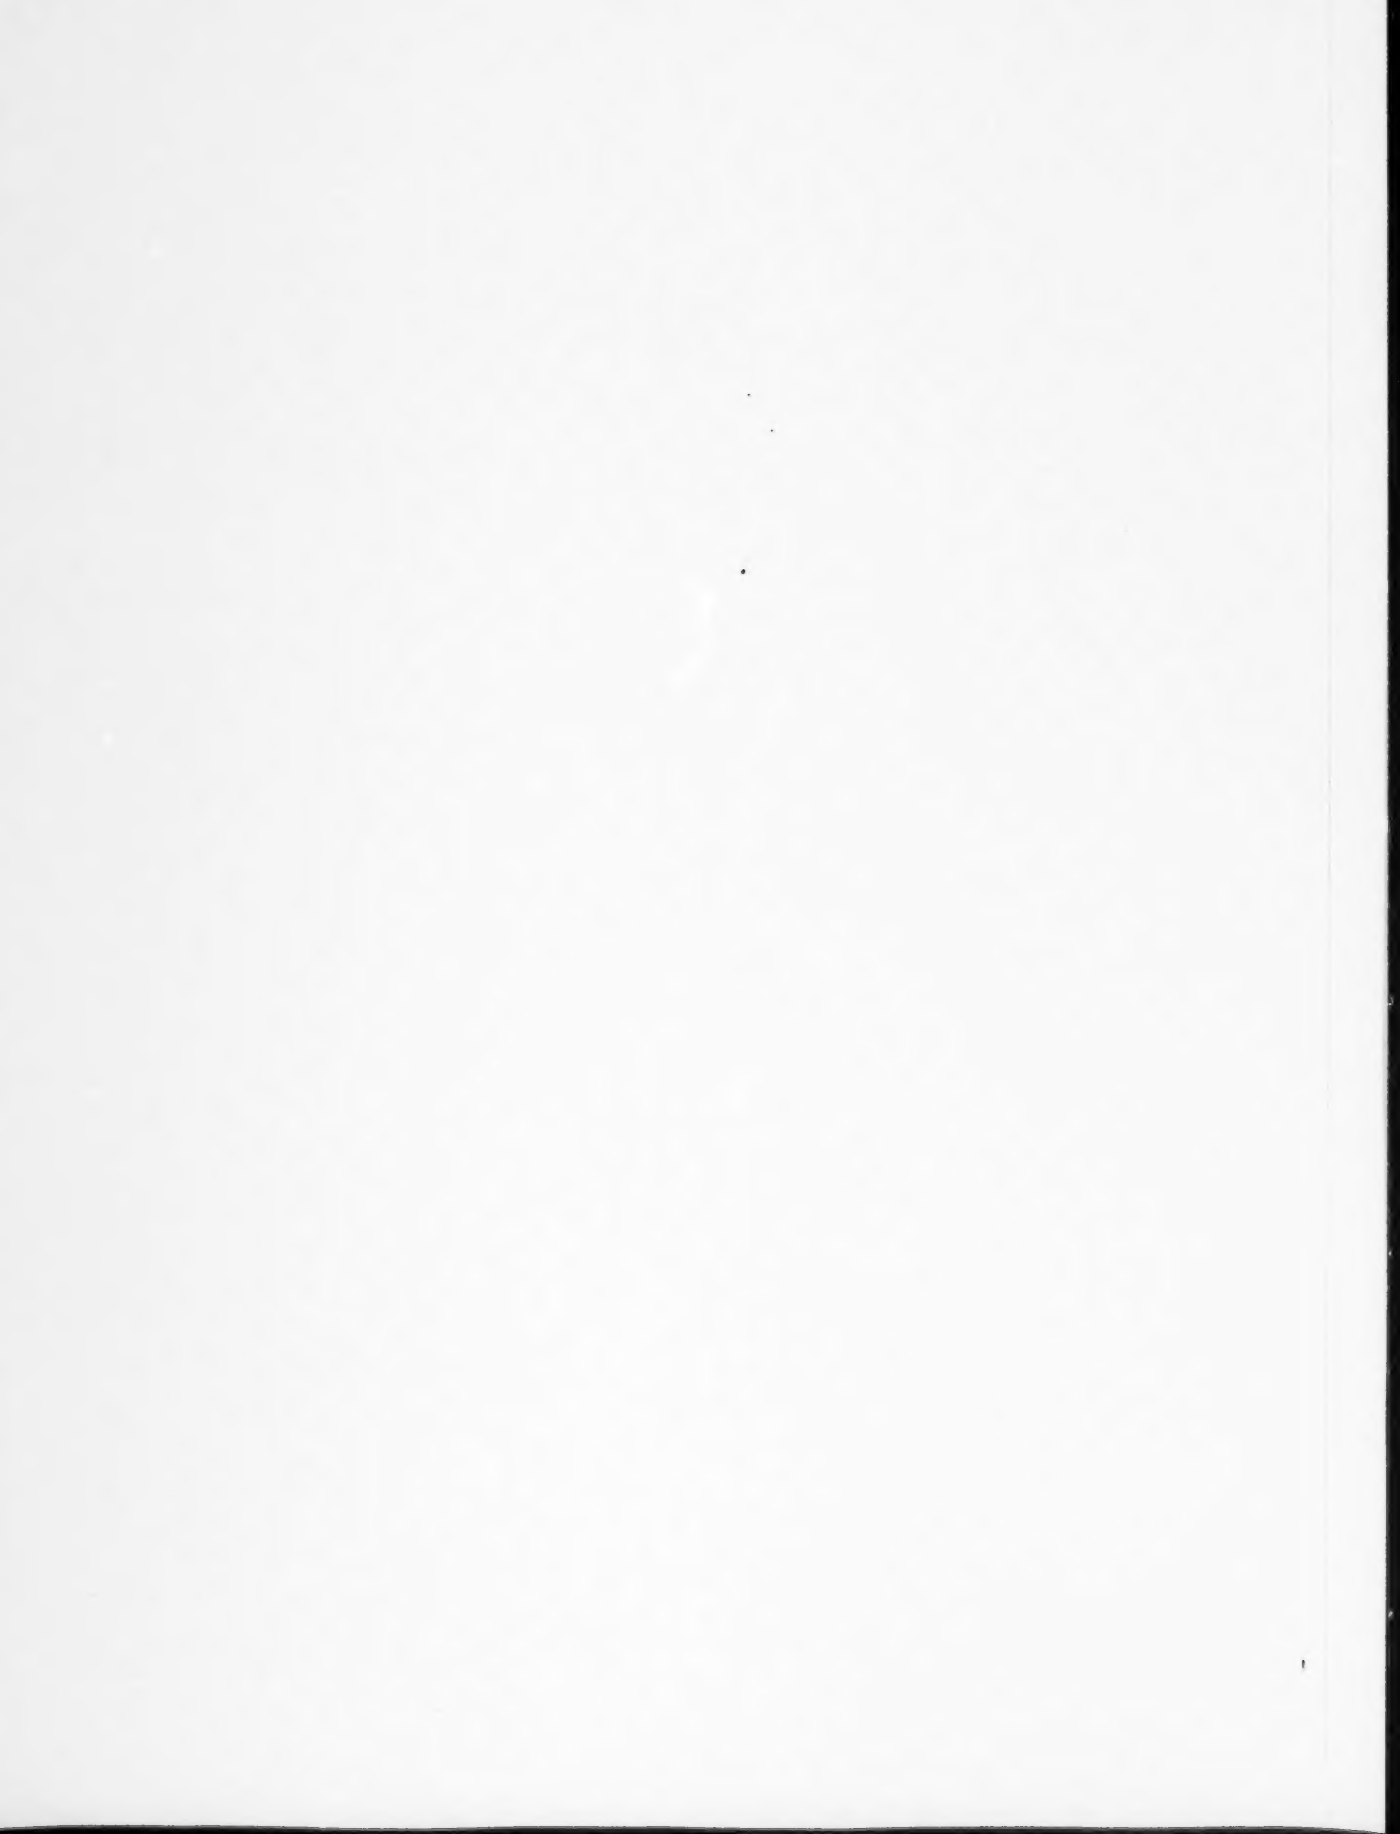

The Maritime Provinces Atlantic salmon sport catch in 1987 was 45,301 fish - 32,326 grilse retained, 1,247 grilse released, and 11,754 large salmon (> 63 cm fork length) released. Field staff estimated that 32 New Brunswick rivers produced 25,754 bright fish (20,261 grilse retained) and 3,259 kelts. Nova Scotia anglers reported fishing on 98 rivers and retained or released a total of 15,917 large salmon and grilse. A total of 476 grilse were angled on Prince Edward Island. Anglers spent 81,300 rod-days on New Brunswick rivers and 69,310 rod-days on Nova Scotia rivers during the 1987 season. Catch per unit effort (fish per rod-day) for the Maritimes was 0.297.

Keywords: Atlantic salmon, sport catch, rod-days, kelts, grilse, large salmon, New Brunswick, Nova Scotia, Maritimes.

RÉSUMÉ

O'Neil, S.F., K. Newbould and R. Pickard. 1989. 1987 Atlantic salmon sport catch statistics, Maritime Provinces. Can. Data Rep. Fish. Aquat. Sci. No. 770. v + 73 p.

Les prises sportives de saumon de l'Atlantique effectuées dans les provinces Maritimes en 1987 s'établissent à 45 301 saumons, soit 32 326 madeleineaux capturés et gardés, 1 247 madeleineaux remis à l'eau et 11 754 gros saumons (plus de 63 cm de longueur à la fourche) remis à l'eau. Les employés des régions concernées ont estimé à 25 754 saumons de montée (20 261 madeleineaux gardés) et 3 259 charognards les prises obtenues dans 32 rivières du Nouveau-Brunswick. En Nouvelle-Écosse, les prises sportives de saumon, soit gardées soit remises à l'eau, obtenues dans 98 rivières s'élèvent à 15 917 gros saumons et madeleineaux. À l'Île-du-Prince-Édouard, les prises se sont limitées à 476 madeleineaux. En 1987, les pêcheurs ont consacré à la pêche 81 300 journées au Nouveau-Brunswick et 69 310 en Nouvelle-Écosse. La prise par effort unitaire (poissons par journée de pêche) pour les Maritimes a été de 0,297.

INTRODUCTION

This report provides catch and effort statistics for the Atlantic salmon sport catch in the Maritime Provinces in 1987.

The data provided in this report have been divided into two main sections based on the source of information. The first section includes catch and effort statistics for Atlantic salmon angling in New Brunswick and Prince Edward Island rivers. The data is based on estimates provided by Fisheries and Oceans fishery officers and New Brunswick Department of Natural Resources and Energy district biologists from conversations with anglers, actual observation, and review of angler diaries. The second section of this report contains angling statistics on Nova Scotia's many streams and rivers summarized from the more than 6,600 catch and effort reports supplied by anglers to the Nova Scotia Department of Lands and Forests. Maps of Maritime Atlantic salmon rivers and "salmon fishing areas" with accompanying list of rivers are provided in Appendix 1.

COMMENT ON THE SOURCES OF DATA

Since 1951, staff from Fisheries and Oceans or its predecessors, have made a concerted effort to summarize Atlantic salmon angler catch and effort. Public interest in Atlantic salmon and the close proximity of many towns to salmon rivers kept the general public involved and visibly aware of the success of each years salmon run. In the 1950s and 1960s, river guardians were employed on many rivers by the Department to protect Atlantic salmon from poaching and to provide reasonably accurate estimates of angler effort and harvest.

The demand for reliable catch and effort data has never been more critical than now. In the 1950s, salmon runs were not considered immediately threatened; so data gathering was more for general information for the angling public than for use as a management tool. Recent declines in Atlantic salmon, both in run diversity and magnitude, have resulted in a greater need for accurate data for effective management. However, the responsibilities for enforcement (field) staff have increased somewhat since the days of the guardians. Those increased demands have radically decreased the amount of time fishery officers have been spending on rivers. Understandably, salmon data gathering has suffered, with the result that fishery officer estimates of Atlantic salmon exploitation by anglers are almost non-existent in most Maritime areas today. The cause is directly related to priorities.

Alternate systems of data collection, however, have begun to evolve. In Nova Scotia, an alternate form of data collection was implemented in 1983 to compensate for the eroding word-of-mouth system and to take advantage of the

coincident introduction of an Atlantic salmon angling license.

In New Brunswick, many of the rivers which drain into the Bay of Fundy have not received sufficient attention by federal fishery officers in the past several years to permit accurate catch-effort estimates. District biologists with the New Brunswick Department of Natural Resources and Energy have helped fill the gap on numerous occasions. They have employed various methods for data collection which include the use of angler diaries, creel surveys, and word-of-mouth reports. Data are still being collected, sporadically and in an unorganized fashion, on various other rivers in the province by Fisheries and Oceans field staff.

Uncertainty about the source and accuracy of much of the New Brunswick data collected during the past few years has rendered it tentative, at best. As a result, this years report of New Brunswick Atlantic salmon sport catch has numerous estimates based on averages or very rough guesses of catch and effort from one or two local anglers. This is particularly true on the Saint John river system, and applies elsewhere for estimates of numbers of large salmon released. Multi-year comparisons should only be done with the unique characteristics of this year's New Brunswick data in mind.

COMMENT ON THE FISHERY

The estimated Canadian Atlantic salmon sport catch in 1986 of 108,000 fish was approximately equal to or exceeded the catch in all but two of the previous eighteen years (Table 1). The 1986 figure also represents the third consecutive increase in Canadian sport catch. The reported harvest of Atlantic salmon has consisted primarily of grilse or 1 sea-winter fish since 1983. Consequently, comparison of recent harvest with that of previous years, which consisted of large salmon (multi-sea-winter-fish) and grilse, renders the recent increase even more remarkable.

MARITIME PROVINCES

The Atlantic Salmon Management Plan initiated in 1984 was continued through 1987; anglers were again required to release salmon 63 cm or more in length. The change in regulations has resulted in three separate categories of angled fish: (1) large salmon released; (2) grilse released, and (3) grilse retained. The latter category, retained grilse, represents the legal salmon kill or harvest under the management plan. Since all salmon (large salmon and grilse) reported caught prior to 1983 were recorded as retained, it is inappropriate to compare recent total harvest with catches of earlier years. In addition, an annual bag limit imposed in the Maritime Provinces in 1984 further reduced the potential legal

kill from the previous season-long 2 per day daily bag limit to the current season total of 10 fish in all three Maritime Provinces.

In 1987, 32,300 grilse were reported harvested in the Maritime Provinces, which is down considerably from the exceptional catch of 48,500 fish in 1986, and is slightly below the 1970-86 long-term average catch of 37,300 fish (Table 2). Extreme drought conditions in 1987 limited fish availability which contributed to the downturn in total harvest after 3 years of successive increases. On some rivers angling seasons were closed early and on others, fish did not enter the rivers until late in the fishing season or after its close (Tables 9 and 17). Examination of a sample of Maritime river summer (June-September) flows or discharges over the period 1981-87 clearly indicates that 1987 water levels were the lowest of the period (Figure 1).

The kelt or black salmon fishery in 1987 yielded 3,200 grilse, nearly double the estimated catch in 1986 of 1,700 grilse (Table 2). In spite of the improved landings, however, the number is well below the long-term (1970-86) mean of 6,900 fish. Recent kelt catch estimates exclude the number of large salmon released, so would be expected to be below the long-term average, which would include estimates of MSW salmon harvest. Catch by year of run for 1986, which is the sum of the bright catch in 1986 and the kelt harvest in 1987, is the third highest since 1970 and is considerably greater than any catch reported since 1977 (Table 3). This further supports the evidence that closure of the commercial fishery has had a significant positive impact on the number of salmon entering rivers.

Unusually low summer water levels also influenced angler effort. Anglers collectively fished 153,000 rod-days in 1987 as compared with the highest recorded single season effort of 191,000 rod days reported in 1986 (Table 4). In spite of the season closures and low water levels, the effort figure is well above the 1970-86 mean of 134,000 rod-days.

The overall catch per unit effort (CPUE) or fish per rod-day for the Maritime Provinces was 0.297 in 1987. This represents a better average catch rate than in 1986 when the CPUE was 0.254 and one roughly equal to the mean 1970-86 catch rate of 0.300 (Table 4).

The Maritime provinces comprise all of Scotia-Fundy Region and part of the Gulf Region. The Scotia-Fundy Region includes those portions of New Brunswick and Nova Scotia which border on the Atlantic Ocean and Bay of Fundy. The Maritime Provinces portion of the Gulf Region includes the remaining areas of New Brunswick and Nova Scotia which border on the Gulf of St. Lawrence, and all of Prince Edward Island. Atlantic salmon anglers visited 132 rivers

within the Maritimes in 1987, 93 in Scotia-Fundy Region and 39 in the Gulf. The collective harvest indicates that the 11,300 grilse taken in the Scotia-Fundy Region is consistent with that seen in recent years, but the 21,000 fish retained from Gulf waters in 1987 is well below the 37,300 fish harvested in 1986 (Table 5).

Fish counts at several of the salmon monitoring facilities in Scotia-Fundy Region indicate that the overall returns of grilse within the region improved in 1987 over the previous two years or more (Table 6 and Table 7). However, a large percentage of those fish may have ascended the rivers after the normal angling season and avoided the fishery.

NEW BRUNSWICK AND PRINCE EDWARD ISLAND

The three largest river drainage basins in the Maritime Provinces, the Saint John, the Miramichi and the Restigouche, are located in New Brunswick. Collectively, these three river systems accounted for 94.5% and 92.2% of the provinces kelt and bright grilse harvest, respectively. The 1987 bright grilse catch in New Brunswick of 20,260 is considerably lower than the 1986 catch of 38,600 grilse but near the recent (1982-86) and long term (1970-86) average catches of 21,700 and 23,800 fish, respectively (Table 2). The estimated 5,500 large salmon released in New Brunswick in 1987 is known to be a partial estimate only (Table 11). Only a fraction of the 32 rivers fished in the province actually had estimates of large fish released available from reporting officers for inclusion in this report.

Anglers in New Brunswick experienced a second consecutive year of improved catch rates over the previous five years, in spite of the poor water conditions (Table 4). The decrease in angler effort to 81,300 rod-days in 1987 from the 111,000 reported in 1986 is largely responsible for the relative improvements in catch per effort.

Notable high catch rates during the 1987 season occurred on the Bartibog 0.532; Kedgewick 0.501; Patapedia 0.660 and Sevogle 0.613 rivers. Rivers tributary to the inner Bay of Fundy east of the Saint John River, on the other hand, had very poor angling success rates. The Big Salmon River, which is characteristic of those rivers, had only 31 grilse angled in 1987 for a CPUE of 0.097. As recently as 1981, over 640 grilse were taken on the big Salmon at a catch rate of 0.20 fish per rod-day.

The number of large salmon caught in the sport fishery was often used as a rough indicator of the relative number of multi-sea-winter fish escaping to rivers. Mandatory release of large salmon has caused us to rely more heavily on fishway returns as indices of relative stock performance. Review of the returns of large fish to the Mactaquac fish monitoring

facility shows a recent downturn in numbers reaching the dam (Table 7). In spite of this obvious recent decrease, i.e., since 1984, many factors could influence the usefulness of those counts as an index of stock performance, such as high seas (Greenland and Newfoundland) and local (Native) commercial fisheries and variations in stocking rates for the year classes contributing to those returns.

Atlantic salmon angling license sales in New Brunswick increased in 1987 to 20,502 from the previous years sales of 19,751 (Table 8). This represents the fourth consecutive increase, after the precipitous decline in sales in 1984. The drop in license sales noted in 1984 has been attributed to a combination of factors, in particular, the poor catches of 1983 and the introduction of the new salmon management plan in 1984 which stipulated release of large salmon in New Brunswick.

The 1987 angling season dates on New Brunswick rivers are given in Table 9; special seasons and variation orders are provided in Table 10.

The statistical portion of this report which includes the New Brunswick and Prince Edward Island rivers provides an alphabetically arranged list of rivers with monthly catch and effort data for each river (Table 12). Additional summaries of the data by river system, Fisheries & Oceans statistical district, county, salmon fishing area, and province, are also included (Tables 13-17).

The Atlantic salmon catch on Prince Edward Island in 1987 of 476 fish (Table 2; exclusive of 15 grilse released in October) was more than double the previous years 236 fish, which represented a provincial high since regular record keeping began in 1951. The explosive increase in numbers was largely due to an enhancement program on the Morell River which accounted for the entire grilse harvest on the island.

The number of rod-days expended by island fishermen in 1987 fell slightly to 2,400 from the 2,800 rod-days reported in 1986 (Table 4). The drop in effort, together with the sharp increase in catch, contributed to a catch per rod-day figure (0.208) far better than that recorded since 1964 (0.215) in Prince Edward Island (Table 4).

NOVA SCOTIA

Nova Scotian and non-resident anglers took home an estimated 8,300 grilse from the 98 rivers fished throughout the province in 1987. Although the catch was somewhat lower than that reported in four previous occasions since 1970, it is substantially above the short term (1982-86) mean of 7,400 fish and longer term (1970-86) mean of 6,600 fish (Table 2). As in New Brunswick, the recent catches represent a significant improvement when it is considered that catch values

prior to 1984 included grilse and large salmon.

The catch and effort statistics for Nova Scotia rivers are based on reports returned by individual anglers. In 1987, 6,663 completed license stubs were returned, an overall response rate of 93%. A review of the Nova Scotia tables in the statistical section of this report will indicate that the estimated total catch, which includes retained and released grilse and large salmon is in excess of 15,800 fish (Table 23). Although this number is difficult to compare with harvest estimates of previous years, it is down slightly from the total catch (retained plus released) of 19,900 fish reported in 1986 (O'Neil et al. 1987).

Effort for Nova Scotia anglers was down roughly 10% from 77,200 rod-days in 1986 to 69,300 rod-days in 1987 (Table 4). License sales, on the other hand, increased from 6,755 in 1986 to 7,177 in 1987 (Table 8). As a result, the average number of rod-days per angler fell as did catch per unit effort, to 0.230 fish per rod-day in 1987 versus 0.260 per rod-day in 1986 (Table 4). These values both remain well above the short (1982-86) and long (1970-86) term means of 0.170 and 0.159, respectively.

Several separate tables are provided in the Nova Scotia statistical section of this report which give details on each river fished in the Province. The format and content of the tables are distinct from those provided for New Brunswick and Prince Edward Island. In general, data in the Nova Scotia section are compiled either by individual river (Tables 19, 23 & 27), by district (Tables 20 and 24), or fishing area (Tables 22 and 26). Data in the tables numbered 19 through 22 provide catch information broken down into retained and released components; Tables 23 through 26 summarize total catch (retained plus released), effort, and catch per unit effort. Table 27 is a monthly breakdown of retained catch by river.

The Cheticamp River is managed under the National Parks Act and Regulations which do not require that anglers hold a provincial fishing license. Catch and effort data are recorded by Cape Breton Highlands National park wardens and have been provided by them for this report (Table 28).

Estimates of catch and effort for anglers who failed to return license stubs were made by either a regression or ratio method, depending on the river. A description of the methodology is provided in Appendix 2.

Open-season dates accompany each river in the Nova Scotia section tables; variation orders and special seasons are listed in Table 29.

ACKNOWLEDGEMENTS

The Nova Scotia salmon angling license stub program is a joint program managed by the Nova Scotia Department of Lands and Forests and the federal Department of Fisheries and Oceans. In particular, the participation and cooperation of the licensing unit at Lands and Forests is greatly appreciated.

Thanks are also due to the many anglers who dutifully recorded their catch and effort and mailed their license stub promptly.

Data on many New Brunswick streams was supplied by staff of the New Brunswick Department of Natural Resources and Energy. The coordination and collection of that data by A. Madden, P. Cronin, T. Pettigrew and E. LeBlanc is a valuable and much appreciated service. The Cape Breton Highlands National Park and Fundy National Park wardens supplied data on rivers within park boundaries.

A. Mohandas assisted in the tabulation and summary of results, R. Dunfield provided editorial comments and M. Hart patiently typed the manuscript. Their assistance is gratefully acknowledged.

* See variation orders and fishing prohibitions on page 11.

TABLE 10. New Brunswick and Prince Edward Island variation orders, fishing prohibitions and special seasons, 1987.

Bartholomew River	Closed to salmon angling in 1987.
Dungarvon River	Closed to angling, including its tributaries from July 15 to July 26, 1987.
Hammond River	Closed to angling in Palmer Brook from its confluence with the Hammond River upstream 200 m to a point as marked by a fishery officer from July 31, 1987 for the remainder of the year.
Little Southwest Miramichi River	Closed to angling including its tributaries from July 15 to July 26, 1987.
Middle River (P.E.I.)	Catch and release "only" season from October 1 - 15, 1987.
Morell River	<ol style="list-style-type: none"> (1) Closed to fishing, including its tributaries, in those waters of the West Branch below Leard's Pond, the East Branch below Hazelgreen Road, Highway 329, and the main stream of the Morell River from the confluence of the West and East branches to the downstream side of the Morell River Bridge, Highway #2 from July 22 to August 25, 1987. (2) Catch and release "only" season from October 1 - 15, 1987.
Nashwaak River	<ol style="list-style-type: none"> (1) Fishing by means of hook, line and rod is prohibited in those waters locally known as Ross Pool, and extending from a point located 150 m downstream of the mouth of Porters Brook to a point located 30 m upstream of the mouth of Porters Brook, from June 1, 1987, for the remainder of the year. (2) Fishing by means of hook, line and rod is prohibited in those waters locally known as Big Basin Pool lying between a point at Grid Reference 49342893 and a point at Grid Reference 49522899 as shown on map Coldstream 21J/6 of the National Topographic Series, scale 1:50,000, from June 15, 1987, for the remainder of the year. (3) Fishing by means of hook, line, and rod is prohibited in those waters, and its tributaries, upstream from its confluence with the Saint John River from July 21 - 28, 1987 and again from August 10 to September 10, 1987.
Nepisiguit	<ol style="list-style-type: none"> (1) Closed to angling in those waters from the head of Pabineau Falls Pool downstream for a distance of 45 meters to a point as marked by a fishery officer from May 13 to October 8, for 1987 only. (2) Closed to angling in waters, from 100 meters above to 100 meters below the Nepisiguit Trap Counting Fence, from May 25 to December 31, 1987.
Northwest Miramichi	<ol style="list-style-type: none"> (1) Closed to angling in those waters from 100 m above to 100 m below the Miner's Bridge from June 1, 1987 for the remainder of the year. (2) Closed to angling including its tributaries, from July 15 to July 26, 1987. (3) Closed to angling in that portion from the Holding Fence at Craig's Pool downstream to Johnson's Bridge from July 27, 1987, for the remainder of the year.
Point Wolfe River	Closed to salmon angling in 1987.
Renous River	<ol style="list-style-type: none"> (1) Closed to angling, including its tributaries, from July 15 to July 26, 1987. (2) Closed time above the branches of the North and South Renous rivers varied to be September 15.

St. Croix River	Daily and yearly catch limits for salmon are varied to be one salmon (grilse) in any one day and five salmon (grilse) in any year.
Saint John River	(1) Fishing by means of hook, line and rod is prohibited in those waters lying between the highway bridge at Grafton and the railroad bridge at Upper Woodstock from June 15, 1987, for the remainder of the year. (2) Fishing by means of hook, line and rod is prohibited in those waters lying between the Grafton Bridge in Woodstock and the hydro dam at Beechwood, including tributaries to those waters, from July 22 to 6 o'clock in the afternoon local time on July 24, 1987.
Sevogle River	Closed to angling, including its tributaries, from July 15 to July 26, 1987.
Southwest Miramichi River	(1) Closed to angling in those waters from a point situated at 100 m above Millbrook downstream to Highway No. 8 bridge from August 20 - 25, 1987. (2) Closed to angling in waters 100 meters above to 100 meters below the Quarryville Bridge from June 27 to December 31, 1987.
Tobique River	(1) Closed to angling in those waters of the Campbell River (right hand branch of the Tobique River) beginning at the mouth of the Mamozekel River upstream to a point 200 m above the Tobique Salmon Enhancement Project Holding Fence from July 16, 1987, for the remainder of the year. (2) Closed to angling in that portion beginning at 200 m below the Salmon Dumping site on the Tobique River upstream to and including the Little Tobique River to Nictau Lake, the Campbell River to the Forks of the River Dee and River Don and the Serpentine River to the mouth of Salmon Hole Brook from July 22, 1987, for the remainder of the year. (3) Closed to angling in that portion 400 m downstream of the Tobique Forks Pool and 400 m upstream from the North and South branches of the Tobique River from July 22, 1987, for the remainder of the year.

TABLE 11. Estimates of large salmon released by anglers on several New Brunswick rivers in 1987.¹

River	Number
Jacquet	77
Kedgwick	394
Little Southwest Miramichi	421
Nashwaak	177 ²
Nepisiguit	500
Northwest Miramichi	681
Patapedia	37
Restigouche	2,362
Saint Croix	9
Saint John	1892
Salmon (Victoria County)	552
Sevogle	154 (bright only)
Traca	27
Upsal	410
Total	5,493

1. Estimates of released fish not available on other New Brunswick rivers.
2. Partial estimate only based on apparent grilse to salmon ratios in sport catch (P. Cronin, NBDNR, pers. comm.)

TABLE 12. Sport catch by individual river for New Brunswick and Prince Edward Island.

NOVA SCOTIA

Table 18. 1987 Nova Scotia Atlantic salmon recreational catch summary data.

Number of licenses issued in 1987	7,188
Number of license stubs returned	6,698
Overall response rate	93.2%
Number of unspoiled stubs used in analysis	6,663

Number of	Observed number	Percent observed	Estimated number
resident anglers	5,916	89	6,253 ^{1,2}
non-resident anglers	747	11	935 ¹
anglers who fished	5,443	82	5,872
anglers who did not fish	1,220	18	1,315
successful anglers	2,875	43	3,101
unsuccessful anglers	2,568	39	2,770
rod-days fished in season	65,424		69,310
rod-days fished by successful anglers	48,248		
rod-days fished by unsuccessful anglers	17,176		
rod-days per angler ³	12.02		12.73
rivers fished per angler ³	1.61		
fish retained	7,947		8,330
grilse retained	7,947		8,330
large salmon retained	0		0
fish released	7,091		7,534
grilse released	1,215		1,286
large salmon released	5,876		6,248
fish angled (retained + released)	15,038		15,854
fish per rod-day	0.230		0.229
fish per angler ³	2.76		2.70
fish per licensee	2.09		2.21

1 Actual number, not estimated.

2 Includes 11 second-issue resident licenses.

3 Angler refers to a licensee who fished; note that 18% of licensees did not fish.

TABLE 29. Nova Scotia variation orders, fishing prohibitions and special seasons, 1987.

Annapolis River	Salmon season varied to be May 16 - August 14, 1987.
Cheticamp River	Season regulated by Parks Canada: May 16 to September 30, 1987.
Clyde River	Season extended to October 15, 1987 in that portion downstream from Quinn's Falls.
East River, Sheet Harbour	(1) Closed to fishing in those waters upstream from the No. 7 Highway Bridge to the Fisheries and Oceans Barrier Dam from June 24 to the end of the salmon season. (2) Closed to fishing in those waters downstream from the power house dam at Malay Falls to the Fisheries and Oceans barrier dam on August 7, 1987 for the remainder of the year.
Ecum Secum River	Closed to fishing in those waters downstream from the inlet of Jud's Pool to the Number 7 Highway Bridge on August 7, 1987 for the remainder of the year.
Gaspereau River (King's County)	Salmon season varied to be May 16 to August 14, 1987.
Gold River	Closed to fishing in those waters downstream from the Rosebank Bridge at New Ross to the Trunk 3 highway bridge at Gold River, but not including its tributaries on July 23, 1987 for the remainder of the year.
Grand River	(1) Closed to fishing between those points as marked by a fishery officer being approximately 90 m upstream and 90 m downstream from Grand River Falls from July 2 to October 5, 1987. (2) Closed to fishing in those waters between the highway bridge at Grand River and Morrison's Bridge at Loch Lomond Lake from July 31 to September 10, 1987.
Inhabitants River	Salmon season closed time extended to October 31, 1987.
Kirby River	Closed to fishing in those waters 15 m (50 ft.) downstream and 15 m (50 ft.) upstream from the No. 24 Highway Bridge at Sheet Harbour Passage from June 24 to September 30, 1987.
LaHave River	(1) Closed to fishing in the pool located immediately below the Morgan Falls Fishway, as marked by a fishery officer from May 10 to the end of the salmon season. (2) Closed to fishing in the North branch, below Sherbrooke Lake, in those waters below New Germany Lake and in the West branch below Rhyno Lake, but not including any tributaries of those branches, on July 29, 1987 for the remainder of the year.

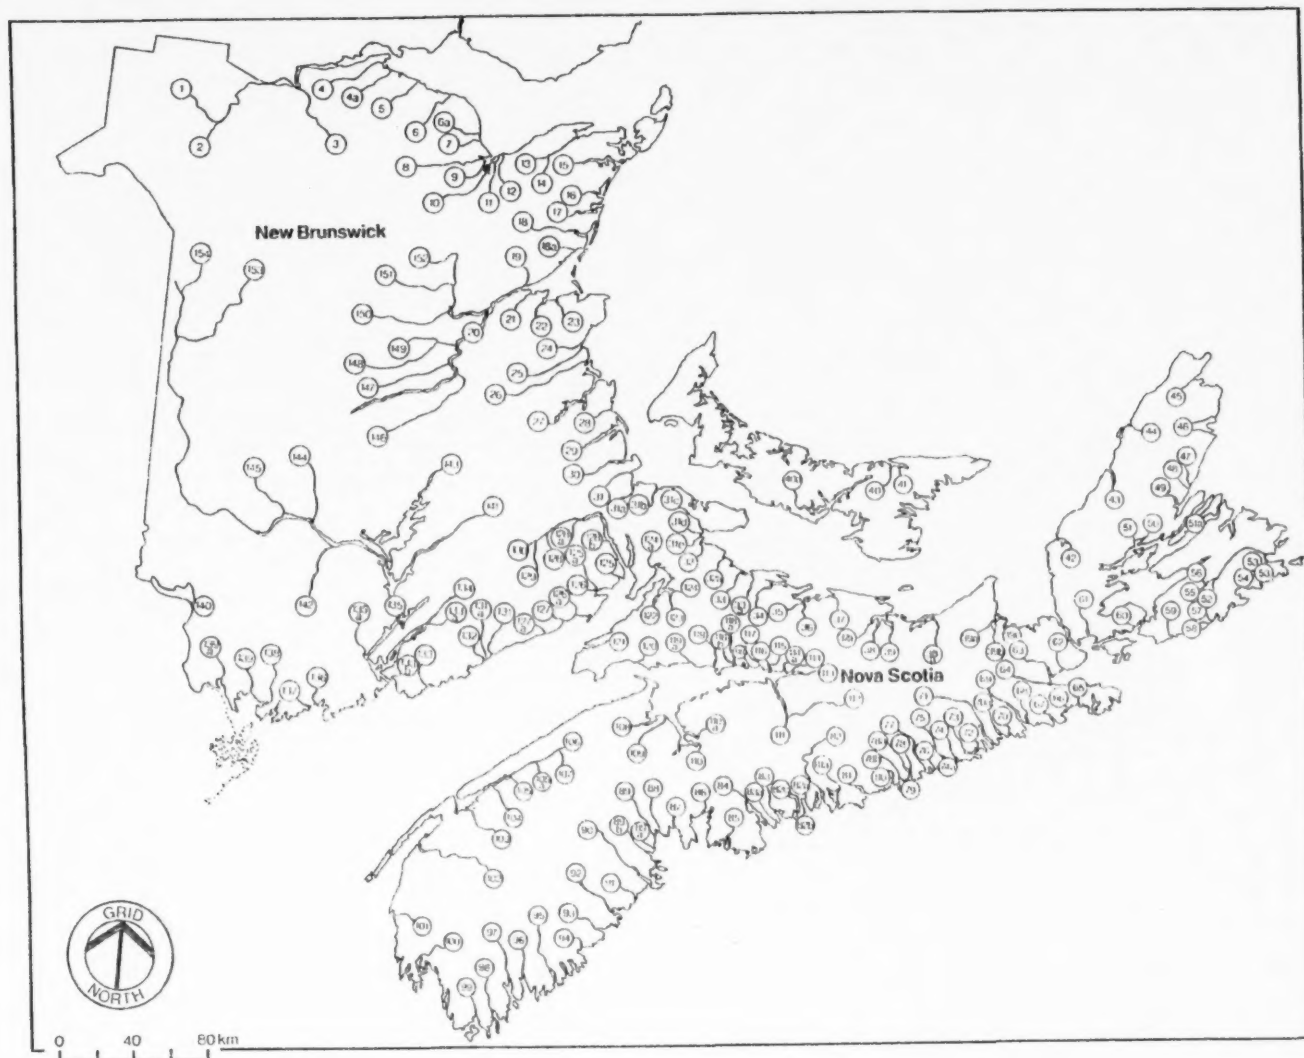

Liscomb River	Reopened for salmon angling from September 15 - 30, 1987.
Margaree River	(1) Those waters, except upstream from the Big Intervale Bridges - season: June 1 - October 15, 1987. (2) Those waters upstream from the Big Intervale Bridges - Closed all year.
Medway River	(1) Closed to fishing in that portion, from a location marked by a fishery officer, above the Westfield highway bridge, upstream to the foot of McGowan Lake from May 10 to the end of the salmon season. (2) Closed to fishing in those waters downstream from McGowan Lake but not including any tributaries to those waters Ponhook Lake on August 1, 1987 for the remainder of the year.
Mersey River	Closed to fishing in those waters downstream from the Cowie Falls dam in Milton to the first highway bridge in Milton, but not including any tributaries to those waters on August 1, 1987 for the remainder of the year.
Moser River	Closed to fishing downstream from Round Lake Inlet to Injum Island in Moser River Estuary on August 7, 1987 for the remainder of the year.
Mushamush River	Closed to fishing in those waters downstream from Little Mushamush Lake to the Trunk 3 highway bridge at Mahone Bay on August 1, 1987 for the remainder of the year.
Musquodoboit River	Closed to fishing downstream from Plaster Rock in Upper Musquodoboit to the head of tide at Musquodoboit Harbour on August 7, 1987 for the remainder of the year.
North River (Victoria Co.)	Closed to fishing in that portion upstream from the highway bridge at North River Bridge from August 11 to September 10, 1987.
Petite River	Closed to fishing in those waters downstream from Hebb Lake to the 331 Collector highway bridge at Petite Rivière, but not including Fancy Lake on August 1, 1987 for the remainder of the year.
St. Mary's River	(1) East River, St. Mary's, upstream from a point 100 m upstream of Silver's Bridge to the Guysborough County line: Season - May 18 to August 14, 1987. River closed on July 10, 1987 for the remainder of the year. (2) West River, St. Mary's upstream from the highway bridge at Glenelg to the Guysborough County line: Season - June 1 to August 14, 1987. River closed on July 10, 1987 for the remainder of the year. (3) Those waters downstream from a point 100 m upstream of Silver's Bridge and downstream from the highway bridge at Glenelg: Season - May 18 to August 29, 1987. River closed on July 14 for the remainder of the year.
Tusket River	(1) Closed to fishing in those waters from the highway bridge at the southern extremity of Lake Vaughan downstream to the Tusket River hydro station, from April 1 to June 30, 1987. (2) Closed to fishing in those waters from the Tusket River hydro holding dam downstream to Anthony's Run Crossroad bridge on June 30, 1987 for the remainder of the year.
West River, Sheet Harbour	(1) Closed to fishing in those waters upstream from the Killog Road Bridge to its source and including all tributaries from June 24, 1987 to the end of the salmon season. (2) Closed to fishing downstream from the Killog Road Bridge to the head of tide on August 7, 1987 for the remainder of the year.

Appendix 2

Calculation of catch and effort estimates

Nova Scotia salmon anglers are required to complete and return catch and effort cards, which are attached to their licenses. Some cards are returned without prompting, but up to three reminder letters are sent to prompt non-respondents. As a result, cards are identified as belonging to one of four response categories: voluntary, post-prompt 1, post-prompt 2, or post-prompt 3. In spite of the numerous prompts, however, overall response was somewhat less than 100% in 1986. Consequently, catch and effort by non-respondents had to be calculated.

The extrapolation of reported data to account for non-response was accomplished using a three step process: (1) estimating the additional province-wide effort expended by non-respondents, (2) proportioning that effort across all rivers according to the effort observed on those rivers, and (3) estimating the total catch on each river by regressing catch on effort and determining total catch at an effort level which incorporates the estimate of unreported effort. Alternatively, if effort information was insufficient, catches were calculated by using a modified ratio method (see 3(b)).

Mathematical representation of the three steps.

1. Ln Cum effort per response category is regressed on Ln Cum returns per response category so that $\text{Ln Cum } E = a + b \text{ Ln Cum } X$. Cum E and Cum X refer to cumulative effort and returns, respectively. The equation is solved for X equal to the total number of licenses sold in the province.

i.e., $\text{Ln } \hat{E} = a + b \text{ Ln (Total license sales)}$
where \hat{E} is the estimated total effort.

The estimated unreported effort (E_u) is found by subtracting the overall total reported or observed effort (E), regardless of category, from the estimated total effort (\hat{E}):

$$E_u = \hat{E} - E$$

2. For river i, estimated total effort (\hat{e}_i) is calculated as follows:

$$\hat{e}_i = \frac{E_u}{E} \times E_u + e_i$$

where e_i is reported effort on river i.

3.(a) For river i, total estimated catch (\hat{c}_i) is arrived at by regressing cumulative catch (Cum c_i) on cumulative effort (Cum e_i) for river i for the four categories, so that:

$$\text{Ln Cum } c_i = a' + b' \text{ Ln Cum } e_i$$

The equation is solved for Cum e_i equal to \hat{e}_i , the total estimated effort on that river.

$$\text{i.e., } \text{Ln } \hat{c}_i = a' + b' \text{ Ln } \hat{e}_i$$

(b) On some rivers, however, cumulative catch can not be regressed on cumulative effort due to the small number of anglers who reported fishing on those rivers. In such instances where there is no reported effort on a particular river for a response category, the estimate of total catch is calculated by a ratio method, as follows:

An estimate of total provincial catch (\hat{C}) is determined by regression as described in 1 to 3(a) above. The ratio of estimated catch (\hat{C}) to observed provincial catch (C) is then applied to the observed catch for each river (c_i) on which effort data for the four categories is incomplete.

$$\hat{c}_i = \frac{\hat{C}}{C} \times c_i$$

where \hat{c}_i is estimated catch for river i.
